A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 26, 2010 has been entered.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 12, 14, 15, 17, 21, 22 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Bijlsma et al (WO 00/57727).

Bijlsma et al disclose nutritional compositions which contain slightly negatively charged non-digestible polysaccharides having a molecular weight of 8 kD to 40,000 kD and viscosity of less than 20 mPa.s (page 1, lines 28-31) and preferably less than 10 mPa.s (page 4, lines 31-33). Bijlsma et al disclose that complete foods and food supplements containing said polysaccharides can be used to treat an inflammatory bowel disease such as Crohn's disease (page 6, lines 4-6). In Example 1 on page 7, Bijlsma et al disclose one such polysaccharide being galactomannan derived from hydrolysed guar gum and in Example 6 on page 8, Bijlsma et al disclose such a polysaccharide in combination with protein based on casein for the treatment of an inflammatory bowel disease. Bijlsma et al also disclose said product can be in liquid form (page 8, lines 8-15).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 12, 14, 15, 17, 21, 22 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bijlsma et al (WO 00/57727) in combination with De La Torre et al (Riviste Italiana Di Nutrizione Parenterale Ed Enterale, Vo. 21, No. 3, pp 105-111, Wichig Editore, Milano, IT, January 1, 2003).

Bijlsma et al disclose methods and compositions as described above. However, it is noted that Bijlsma et al disclose the use of galactomannan among a number of other polysaccharides. De La Torre et al disclose the use of galactomannan derived from partially hydrolysed guar gum for the treatment of an Inflammatory Bowel Disease (IBD). Therefore, a person having ordinary skill in the art at the time the claimed invention was made would have been further motivated to select galactomannan among other polysaccharides disclosed by Bijlsma et al because such a person would have

expected a composition comprising said galactomannan to be effective in treating an inflammatory bowel disease.

Applicant's arguments filed March 26, 2010 have been considered but are moot in view of the new ground(s) of rejection.
